

Como testar a API

Acesse: <https://error-center-api.herokuapp.com/swagger-ui.html>

Logando no sistema:

Em:

1. Autenticação de Usuário - Authentication Controller
POST /auth Login

Clique em:

Try it out

Digite:

```
{  
  "email": "admin@email.com",  
  "senha": "admin123"  
}
```

Clique em:

Execute

Neste momento é gerado um token, copie:

Code	Details
200	<div><p>Response body</p><pre>{ "token": "eyJhbGciOiJIUzI1NiJ9.eyJpc3MiOiJBUkkgQ2VudHJhbnRkZSBFbnJvcyIsInN1YiI6IjQiLCJpYXQiOiJlOTk0OTUyMDAsImV4cCI6MTU5MDk4MTYwMH0.be0b10uYjSW5XS0G9syVRq0snJ10ag_CWYn35Kg3IQ", "type": "Bearer" }</pre><p>Download</p></div>

Acessando endpoints:

Em cada endpoint coloque: Bearer + token em Authorization

Exemplo:

Header para Token JWT

Bearer eyJhbGciOiJIUzI1NiJ9.eyJpc3MiOiJBUkkgQ2VudHJhbnRkZSBFbnJvcyIsInN1YiI6IjQiLCJpYXQiOiJlOTk0OTUyMDAsImV4cCI6MTU5MDk4MTYwMH0.be0b10uYjSW5XS0G9syVRq0snJ10ag_CWYn35Kg3IQ

Colocando o token, preencha os campos pedidos e clique em executar (siga as instruções da documentação do swagger).

Example Value	Model
<pre>{ "description": "string", "details": "string", "nameEnvironment": "string", "nameLevel": "string", "origin": "string" }</pre>	

Dicionário da API:

```
LoginForm{
  email string
  senha string
}
```

```
ResetPasswordDTO{
  confirmPassword string
  email            string
  password         string
  token           string
}
```

```
LogForm{
  description    string
  details        string
  nameEnvironment string
  nameLevel      string
  origin         string
}
```

```
LogDto{
  createdAt    string($date-time)
  description  string
  detail       string
  environmentName string
  frequency    integer($int64)
  Id           integer($int64)
  levelName    string
  origin       string
}
```

```
UserForm{
  email    string
  name     string
  password string
}
```

```
UserDto{
  createdAt string($date-time)
  Email     string
}
```

```
    Id      integer($int64)
    name    string
}
```

```
RoleDto{
    Id      integer($int64)
    roleName string
}
```

```
TokenDto{
    token string
    type  string
}
```

```
EnvironmentForm{
    name string
}
```

```
EnvironmentDto{
    Id   integer($int64)
    name string
}
```

```
LevelForm{
    name string
}
```

```
LevelDto{
    Id   integer($int64)
    name string
}
```
